

Steps to install Java:

Step 1: Open the Software Center and Search for OpenJDK as shown below:

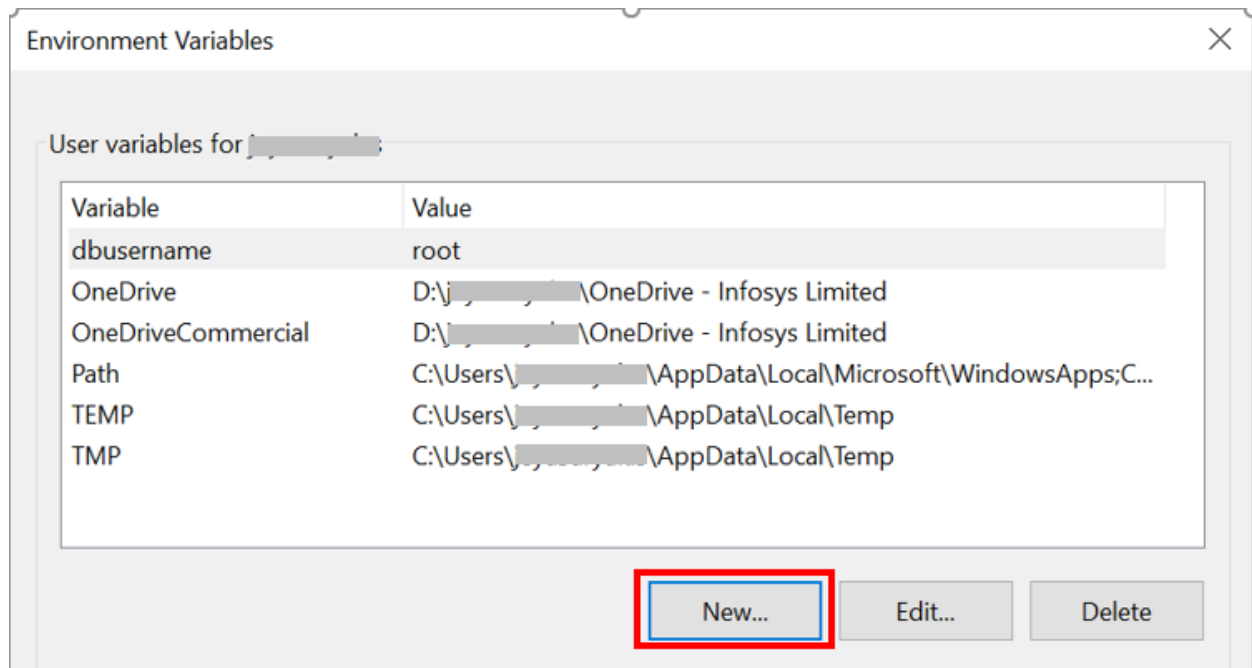

Step 2: Click on the OpenJDK software and click on install.

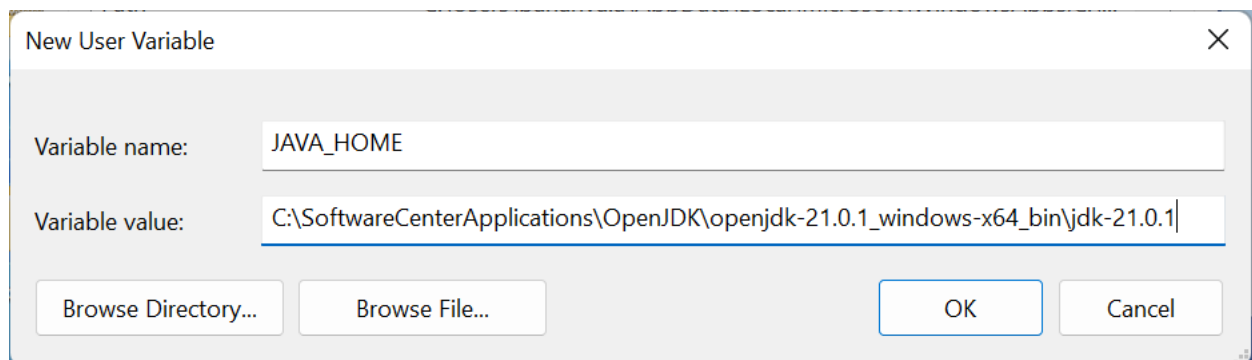

Step 3: Once the installation is done, you will be able to see the OpenJDK created in the path "C:\SoftwareCenterApplications\OpenJDK"

In the taskbar, search for ***Edit environment variables for your account.***

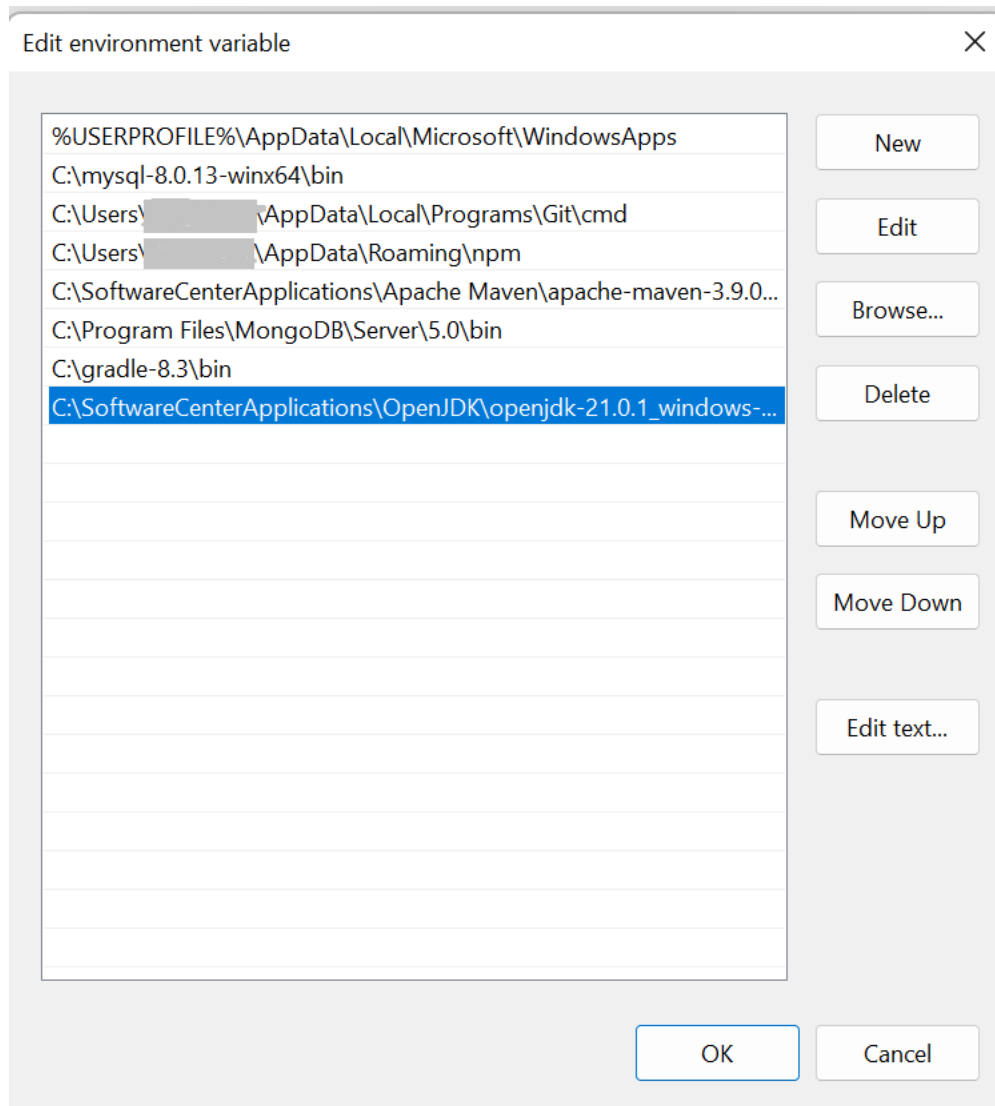

Step 4: In the window that is appearing, click on New as shown below:

Step 5: In the popup, which is appearing, enter the Variable name as **JAVA_HOME** and the Variable value as **C:\SoftwareCenterApplications\OpenJDK\openjdk-21.0.1_windows-x64_bin\jdk-21.0.1** and then click on OK. Refer to the below image.

Step 6: Set the PATH environment variables as shown below.

Through File Server Approach

Step 1: Goto below path and copy the jdk-21 folder

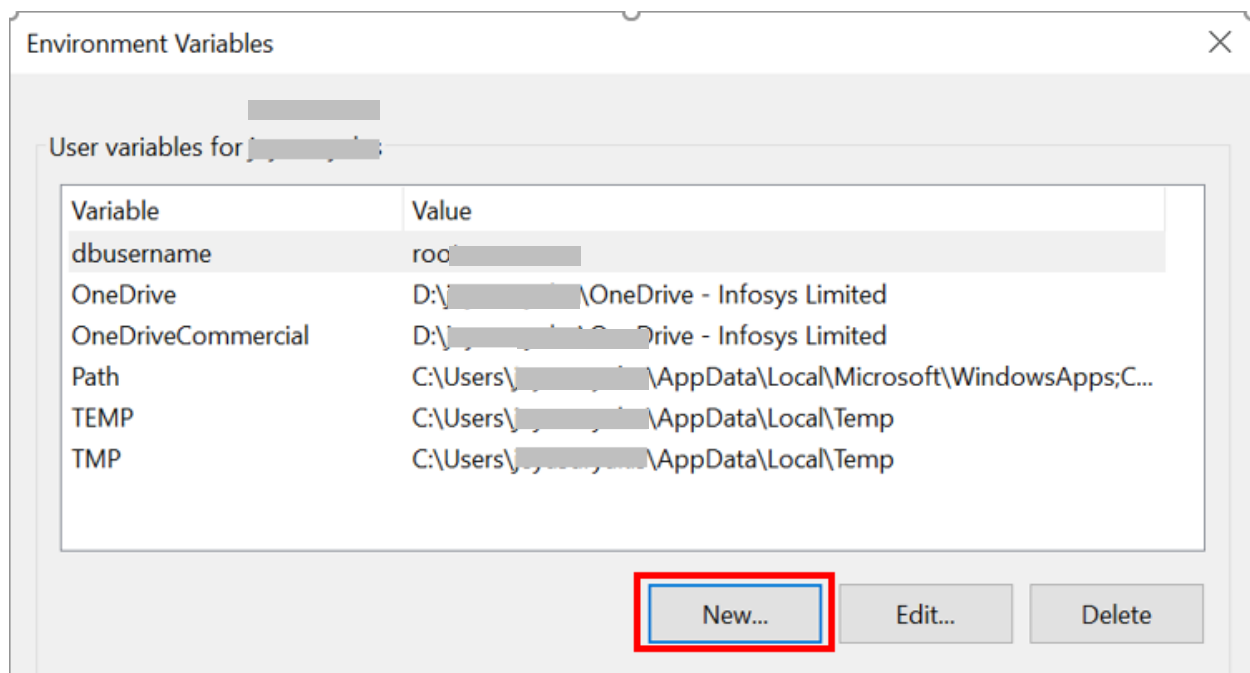

<\\ad.infosys.com\storage\GEC\E&R\Assessment\EXTERNAL\EVERYONE\FP-JAVA\Softwares>

Step 2: Go to C:\ create a folder by the name OpenJDK and paste inside, the copied jdk-21 folder

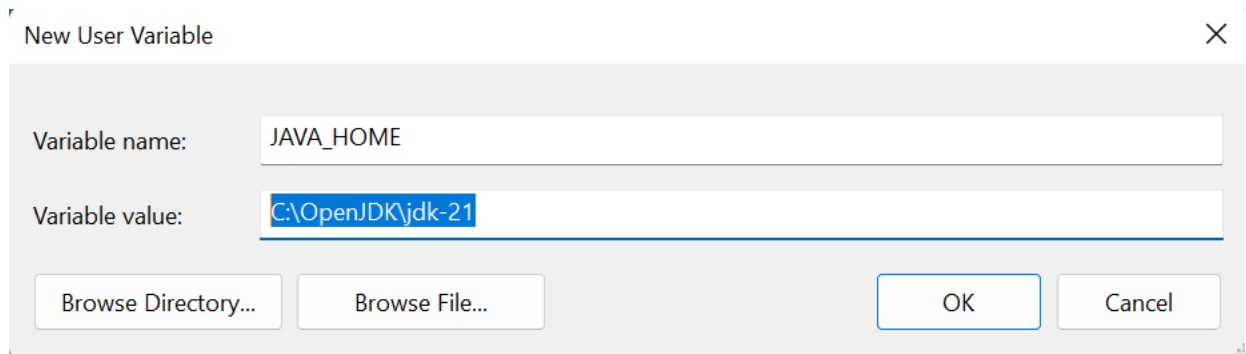

Step 3: Next process is to set the environment variables.

In the taskbar, search for **Edit environment variables for your account**.

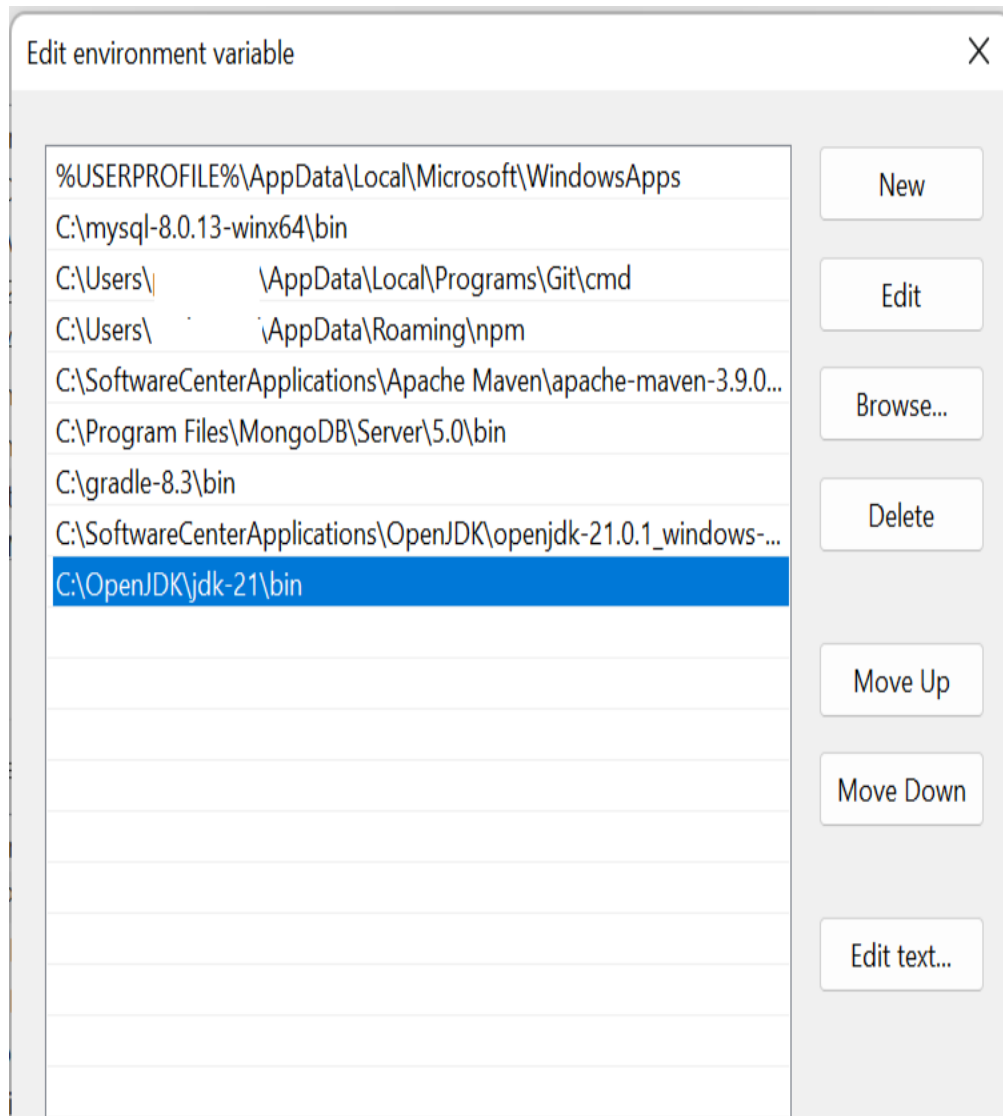

Step 4: In the window that is appearing, click on New as shown below:

Step 5: In the popup, which is appearing, enter the Variable name as **JAVA_HOME** and the Variable value as **C:\OpenJDK\jdk-21** and then click on OK. Refer to the below image.

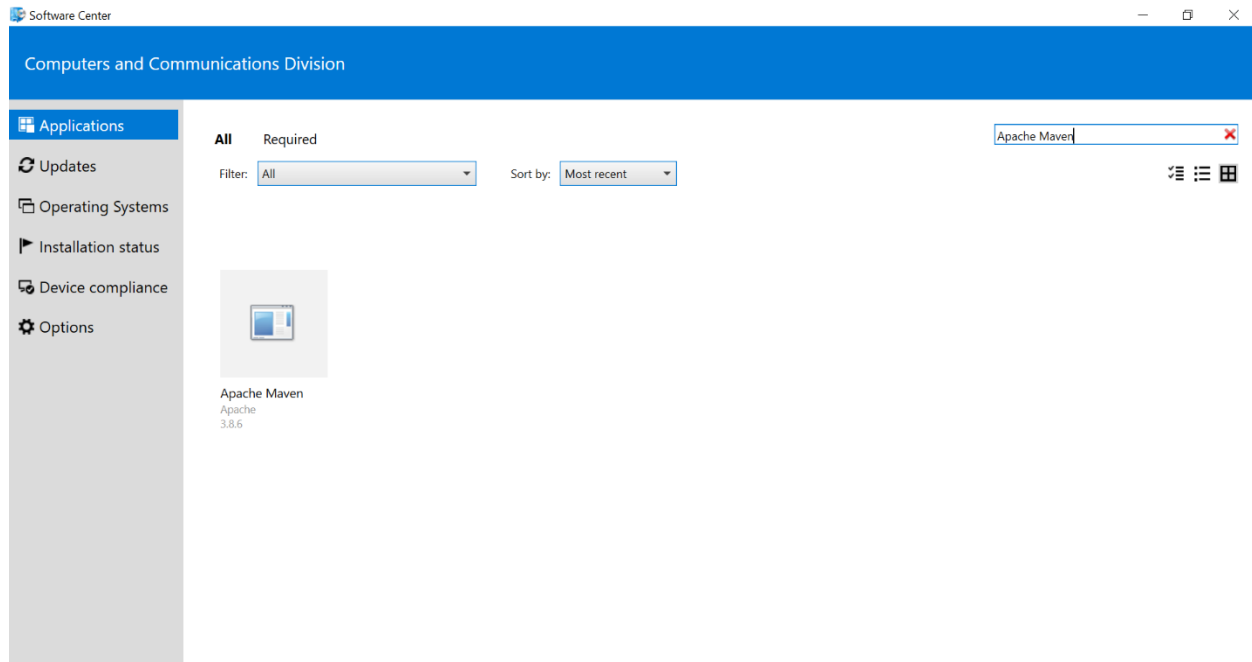

Step 6: Set the PATH environment variables as shown below.

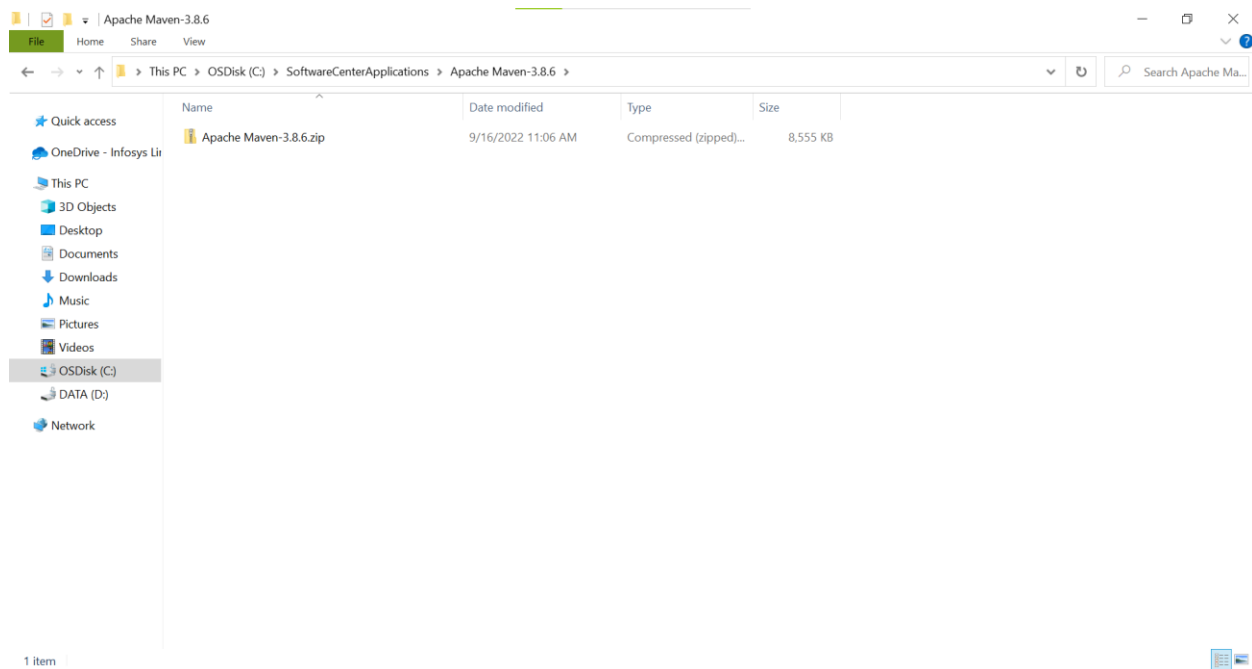

Steps to install Maven:

Step 1: Open the Software Center and Search for Apache Maven as shown below:

Step 2: Click on the Apache Maven software and click on install. Upon successful download, you will be able to see the Apache Maven-3.8.6.zip file in the path “C:\SoftwareCenterApplications\Apache Maven-3.8.6” as shown below:

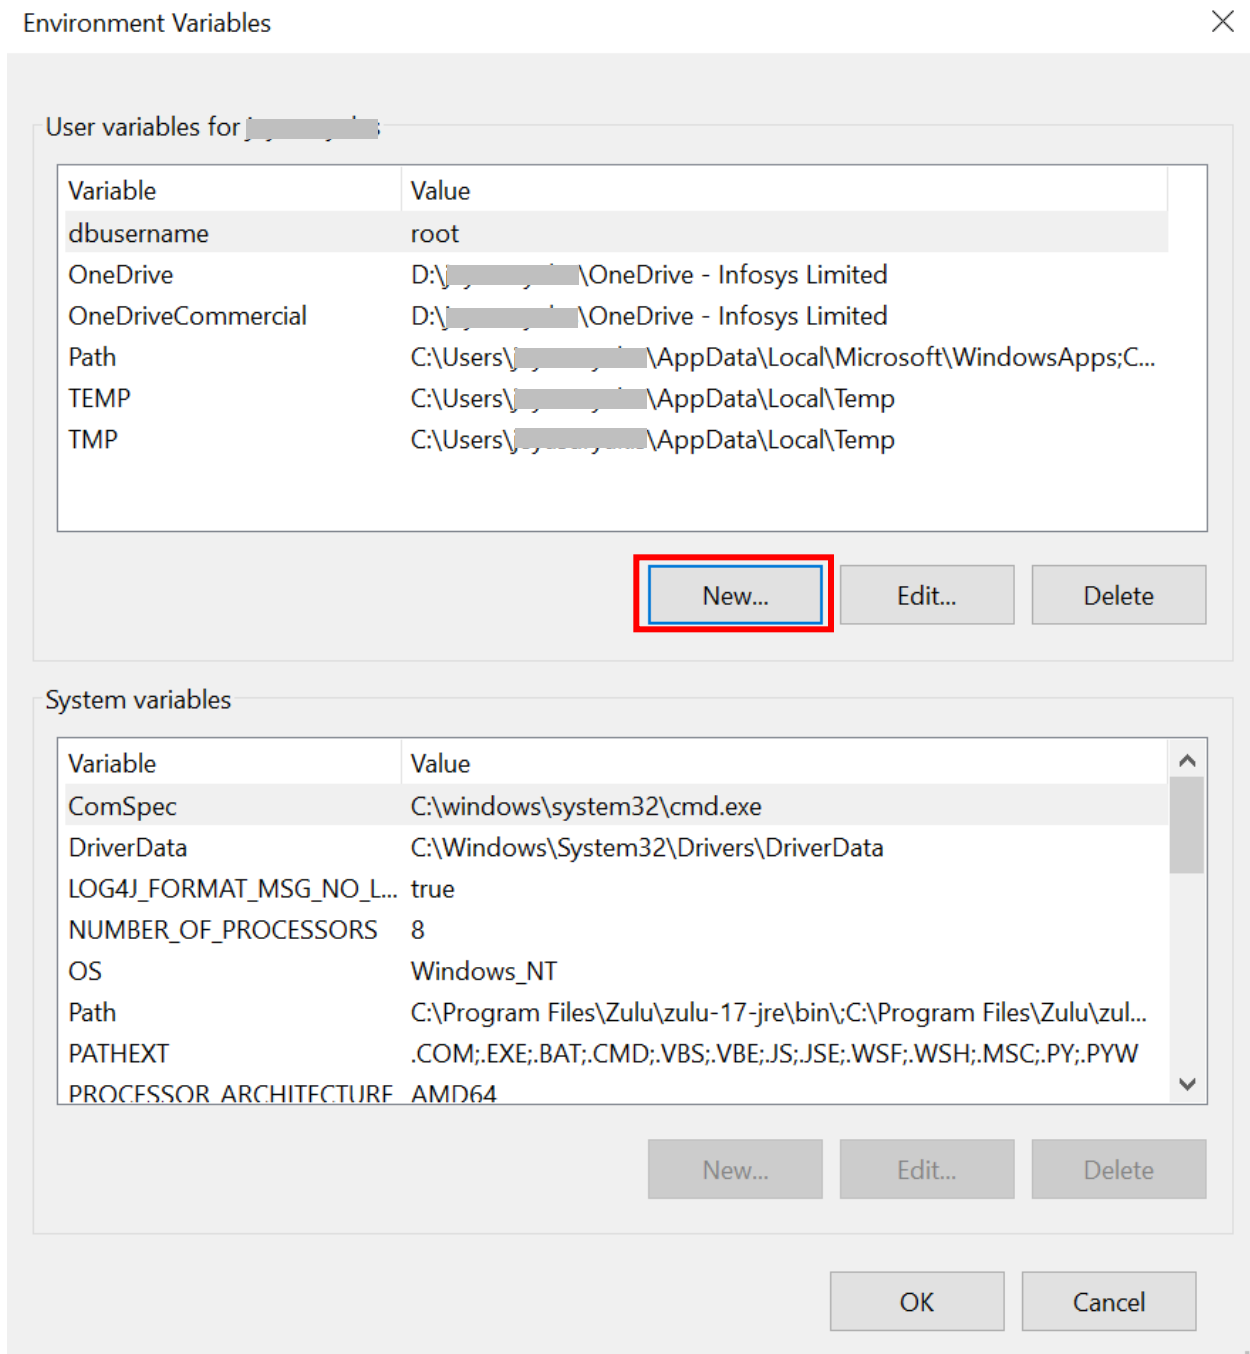

Step 3: Extract the zip file to any desired location (For example, D:\).

Step 4: Next process is to set the environment variables.

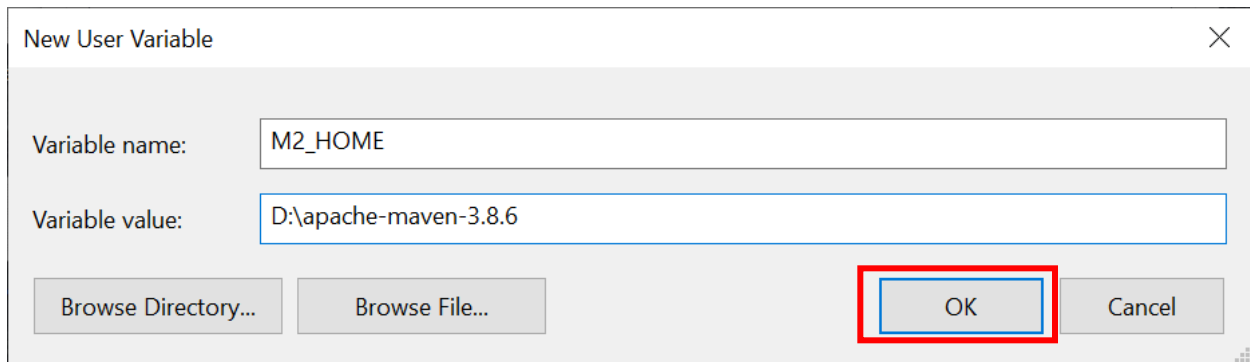

In the taskbar, search for ***Edit environment variables for your account.***

Step 5: In the window that is appearing, click on New as shown below:

Step 6: In the popup, which is appearing, enter the Variable name as **M2_HOME** and the Variable value as the **<Extracted Location>\apache-maven-3.8.6** and then click on OK. Refer to the below image.

In the example case, since We extracted the zip file to "D:\", the Variable value would be **D:\apache-maven-3.8.6**

New User Variable

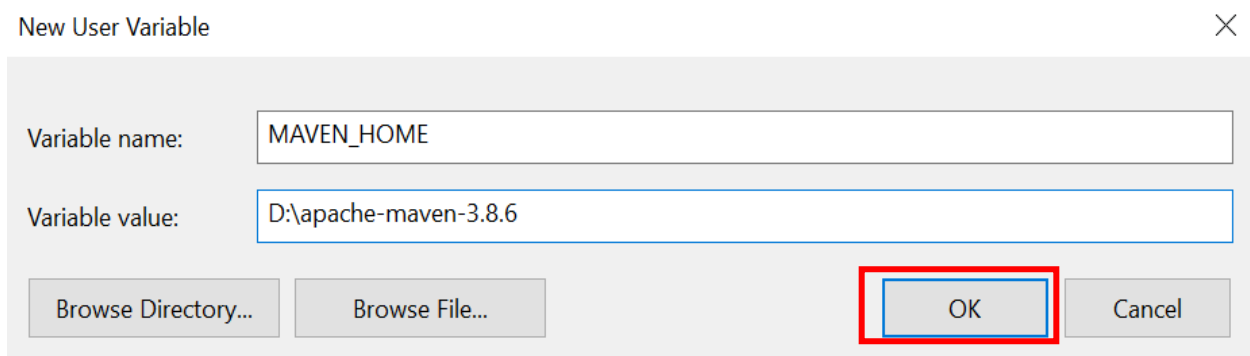

Variable name: M2_HOME

Variable value: D:\apache-maven-3.8.6

Browse Directory... Browse File... OK Cancel

Step 7: Again, click on the New button, and in the popup, which is appearing, enter the Variable name as **MAVEN_HOME** and the Variable value as the **<Extracted Location>\apache-maven-3.8.6** and then click on OK. Refer to the below image.

In the example case, since We extracted the zip file to “**D:**”, the Variable value would be **D:\apache-maven-3.8.6**

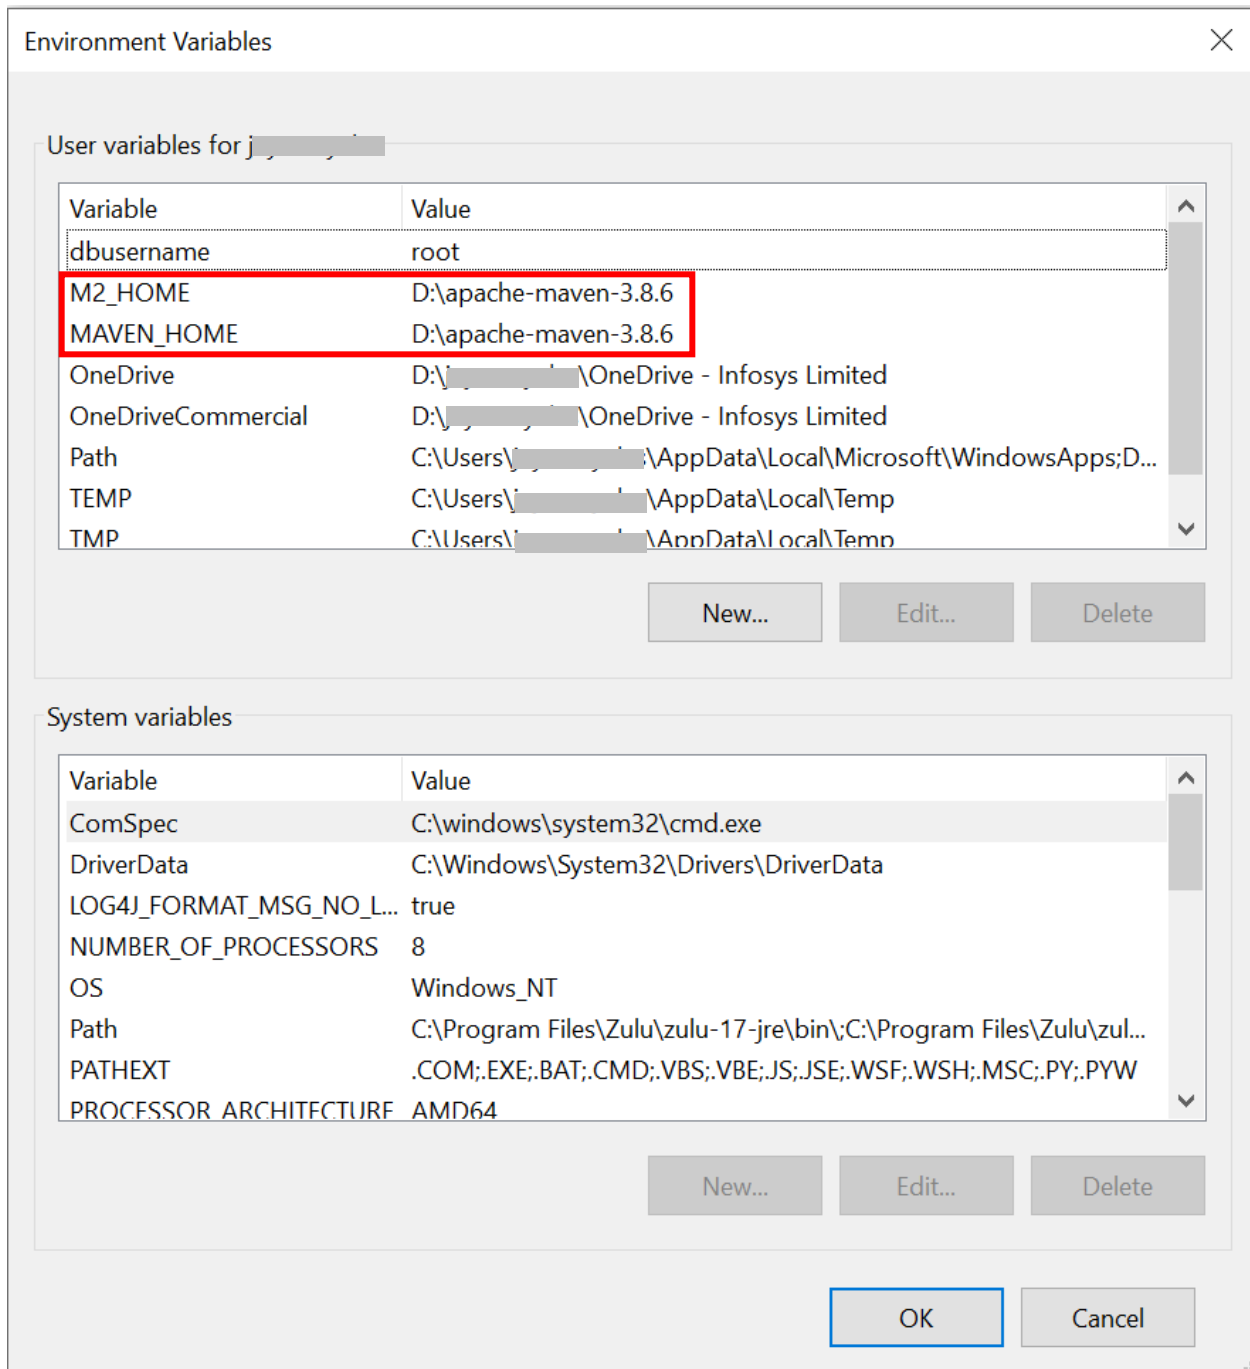

New User Variable

Variable name: MAVEN_HOME

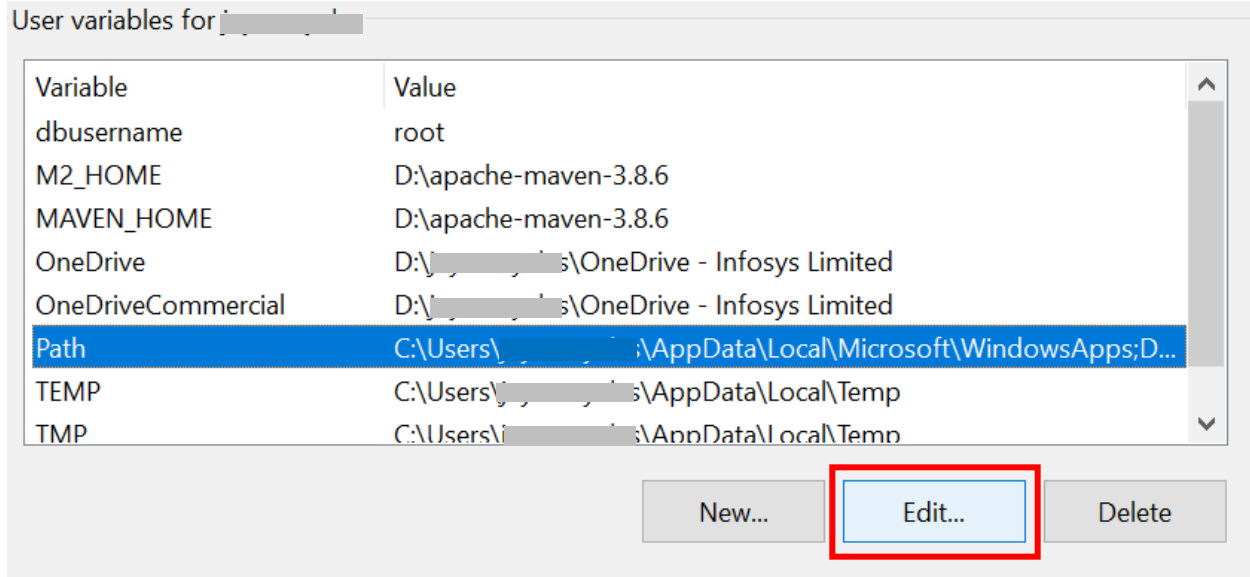

Variable value: D:\apache-maven-3.8.6

Browse Directory... Browse File... OK Cancel

Once the new environment variables are created, the variables should appear as shown in the below image:

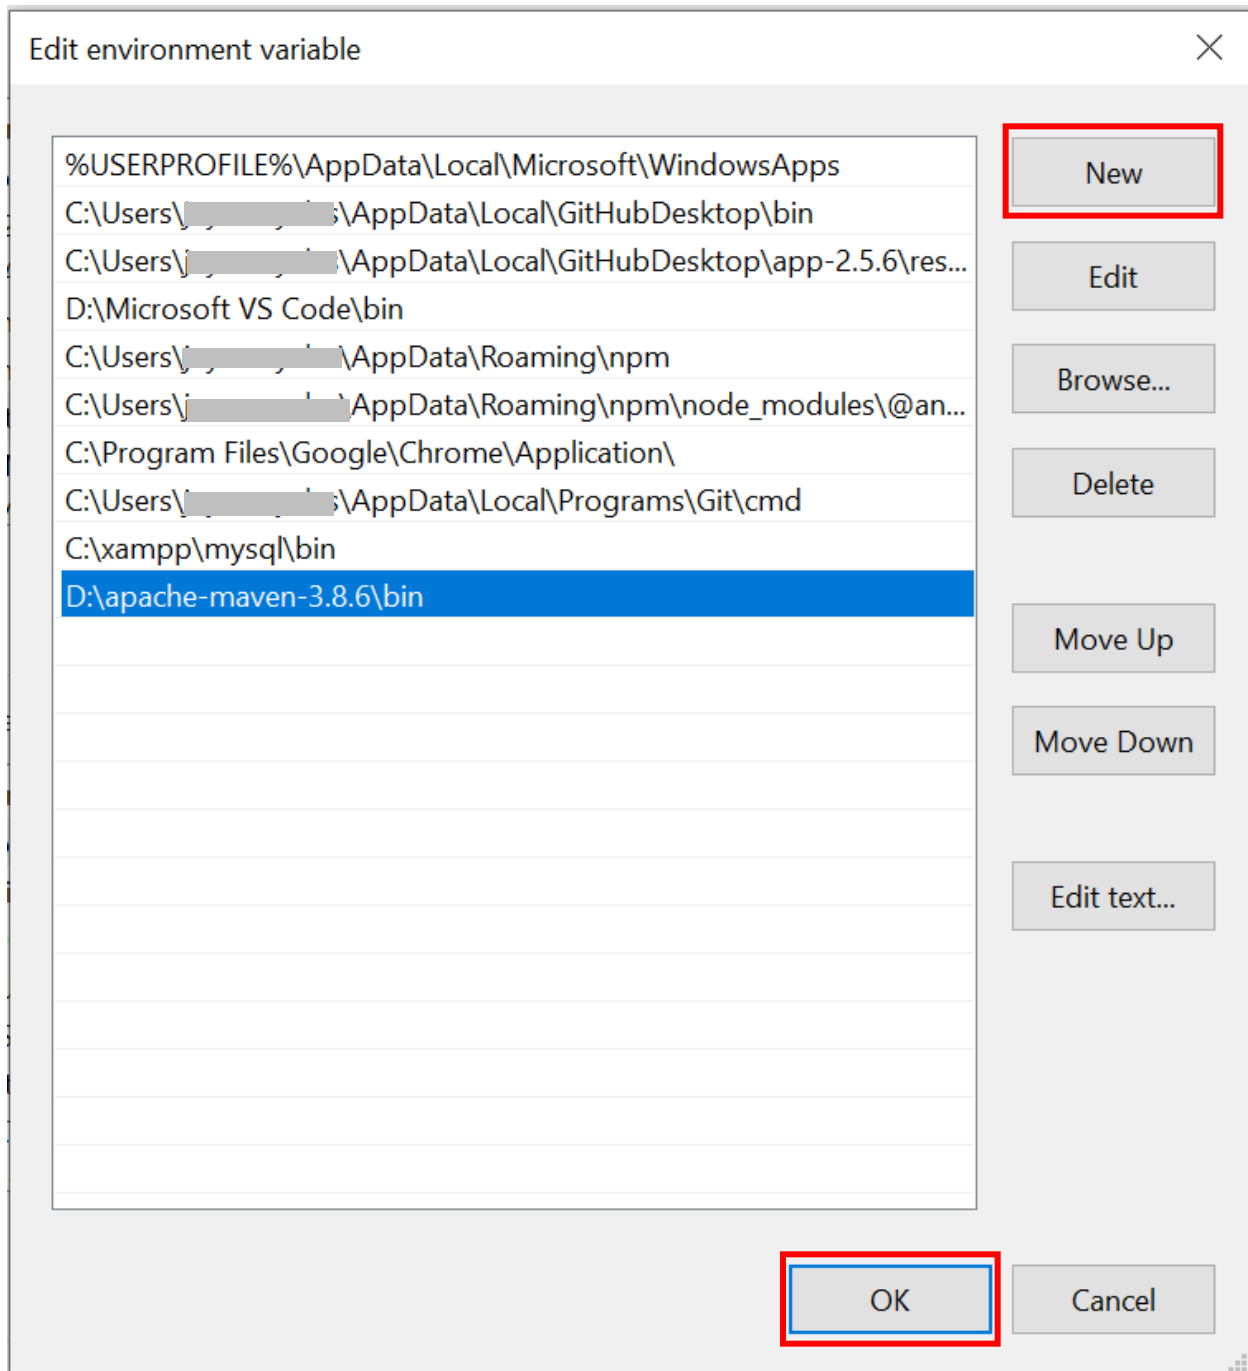

Step 8: Click on the variable **Path** and click on the Edit button as shown below:

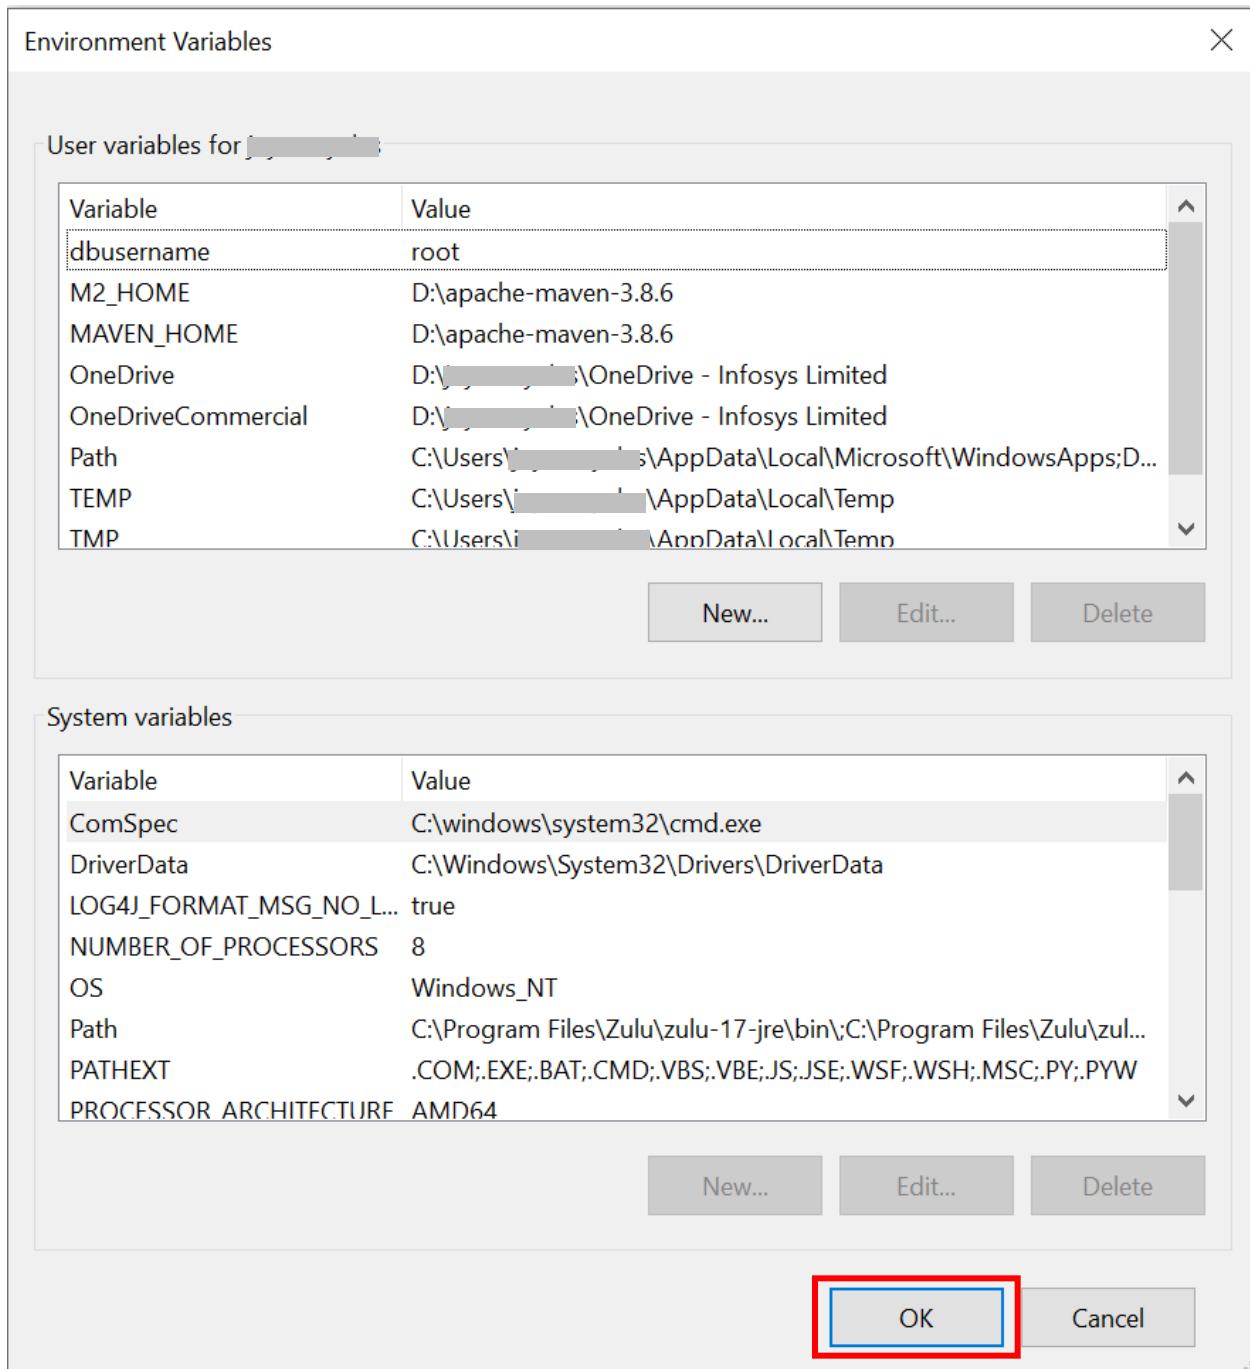

Step 9: In the popup appearing, click on the New button, enter the value as the **<Extracted Location>\apache-maven-3.8.6\bin** and then click on OK. Refer to the below image.

In the example case, since We extracted the zip file to “D:\”, the Variable value would be **D:\apache-maven-3.8.6\bin**

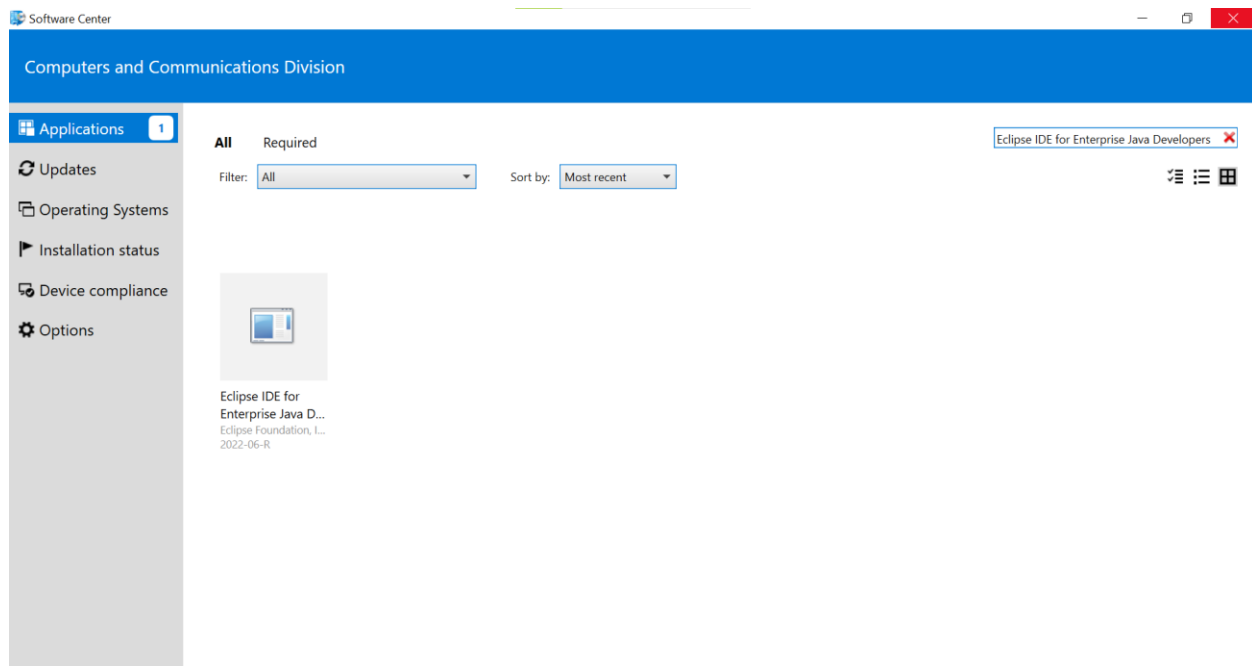

Step 10: Again, click on OK in the exterior window as shown in the below image:

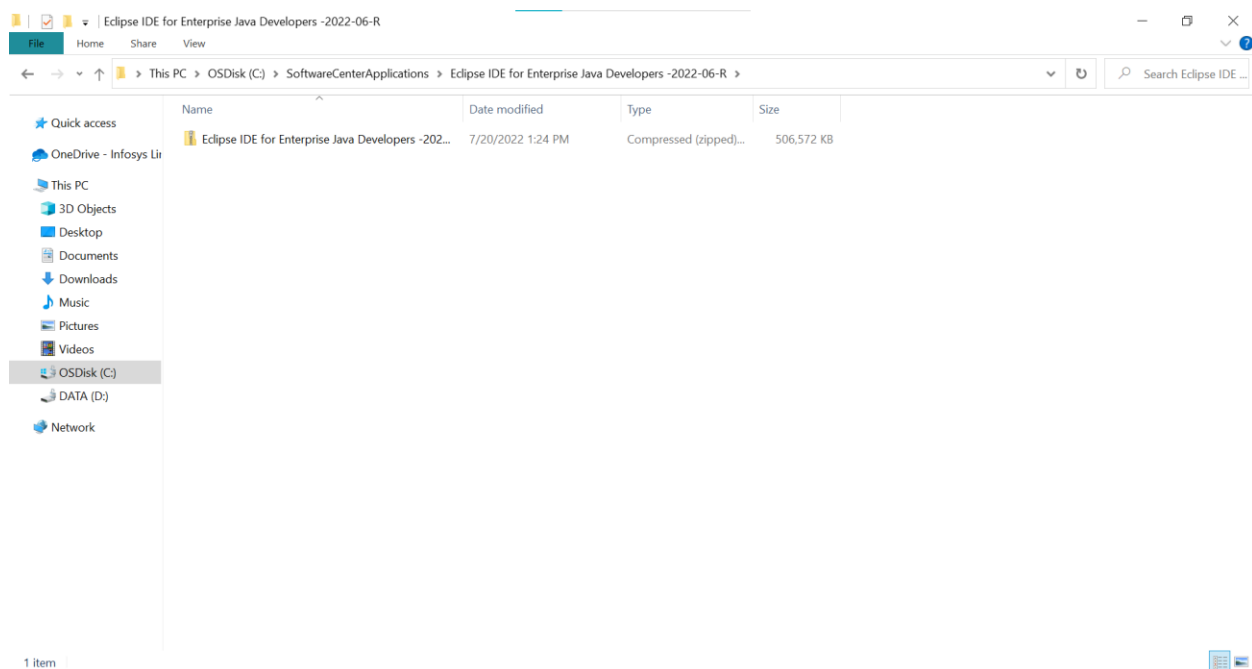

Steps to install Eclipse IDE:

Step 1: Open the Software Center and Search for Eclipse IDE for Enterprise Java Developers as shown below:

Step 2: Click on the Eclipse IDE for Enterprise Java Developers software and click on install. Upon successful download, you can see the Eclipse IDE for Enterprise Java Developers -2022-06-R.zip file in the path.

“C:\SoftwareCenterApplications\Eclipse IDE for Enterprise Java Developers -2022-06-R” as shown below:

Step 3: Extract the zip file to any desired location (For example, D:\).

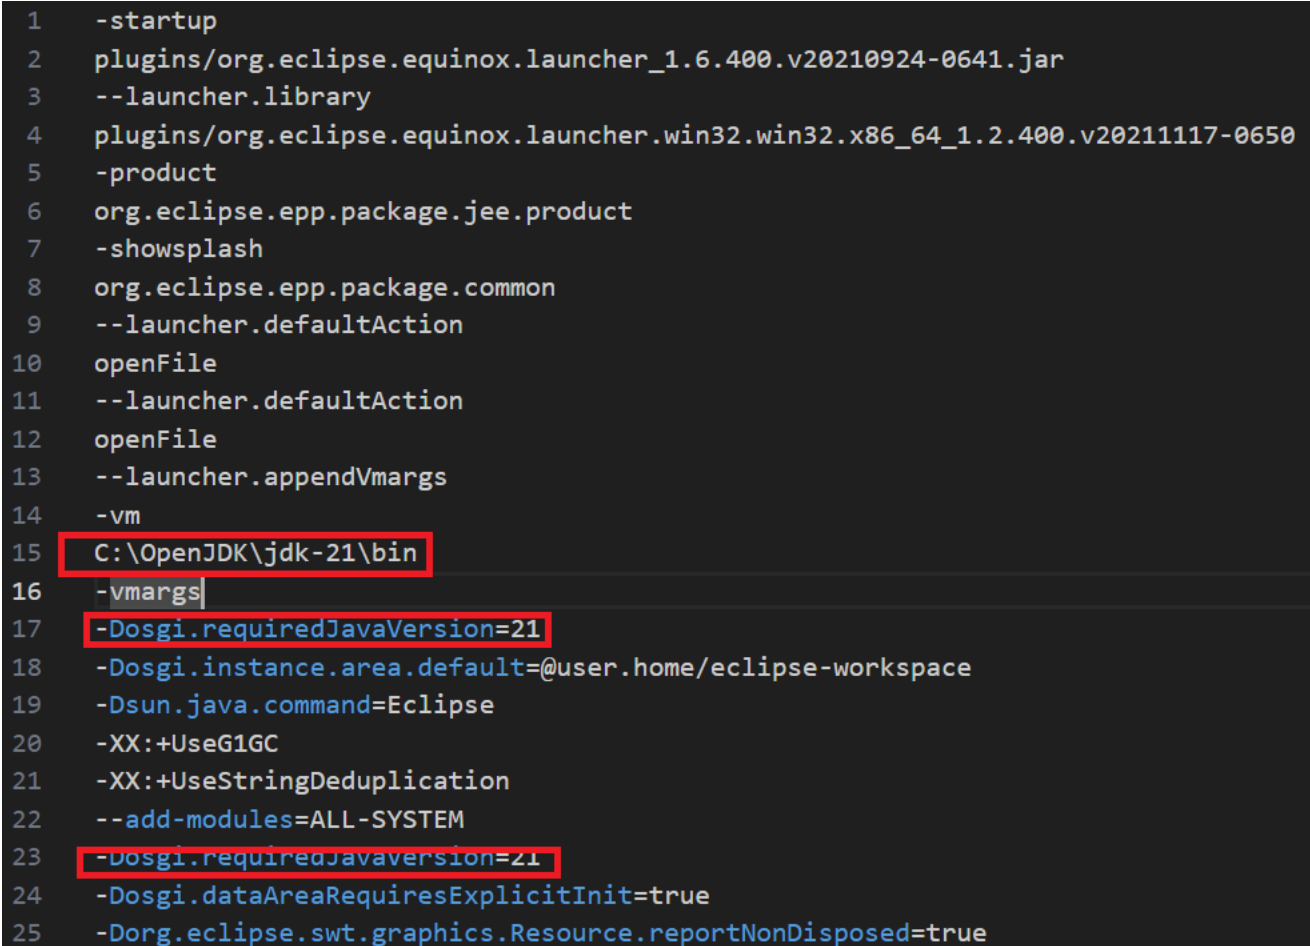

Step 4: Open the eclipse folder created in the extracted folder and right-click on the eclipse.ini file, and click on the Edit option:

Step 5: Modify the file as given below:

In line 15 (below -vm), change it to **C:\OpenJDK\jdk-21\bin**

In lines 17 and 23, modify the **Dosgi.requiredJavaVersion** to 21 (from 17)

Refer to the below image.

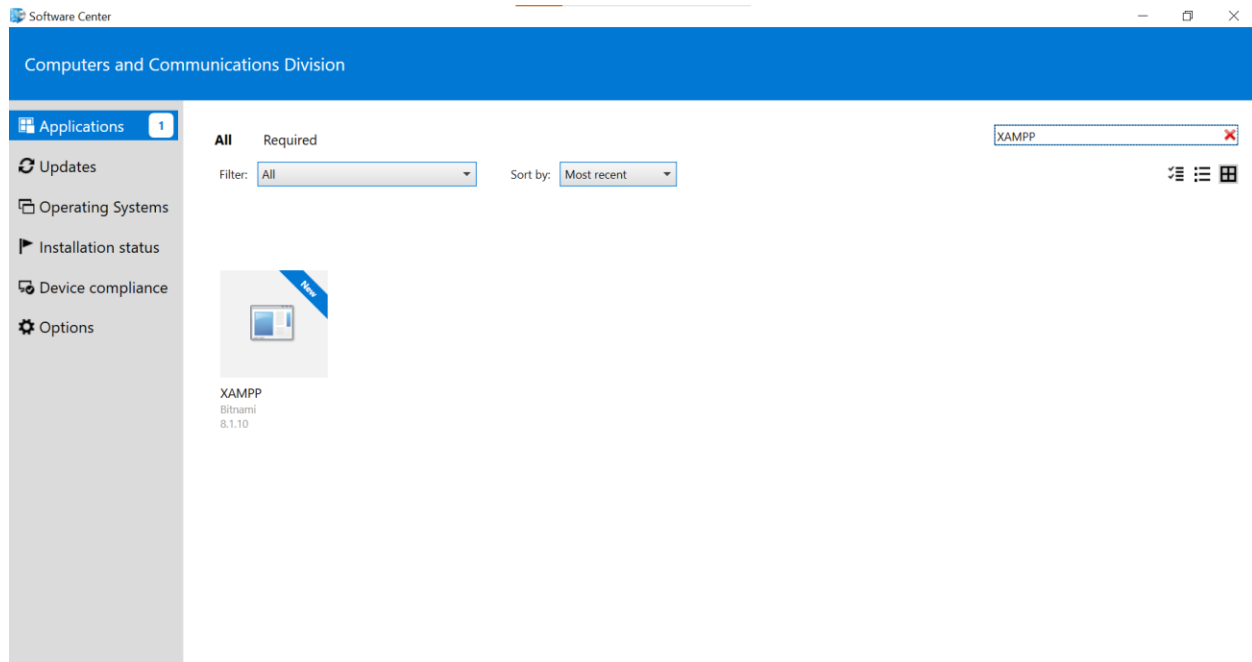

```
1  -startup
2  plugins/org.eclipse.equinox.launcher_1.6.400.v20210924-0641.jar
3  --launcher.library
4  plugins/org.eclipse.equinox.launcher.win32.win32.x86_64_1.2.400.v20211117-0650
5  -product
6  org.eclipse.epp.package.jee.product
7  -showsplash
8  org.eclipse.epp.package.common
9  --launcher.defaultAction
10 openFile
11 --launcher.defaultAction
12 openFile
13 --launcher.appendVmargs
14 -vm
15 C:\OpenJDK\jdk-21\bin
16 -vmargs
17 -Dosgi.requiredJavaVersion=21
18 -Dosgi.instance.area.default=@user.home/eclipse-workspace
19 -Dsun.java.command=Eclipse
20 -XX:+UseG1GC
21 -XX:+UseStringDeduplication
22 --add-modules=ALL-SYSTEM
23 -Dosgi.requiredJavaVersion=21
24 -Dosgi.dataAreaRequiresExplicitInit=true
25 -Dorg.eclipse.swt.graphics.Resource.reportNonDisposed=true
```

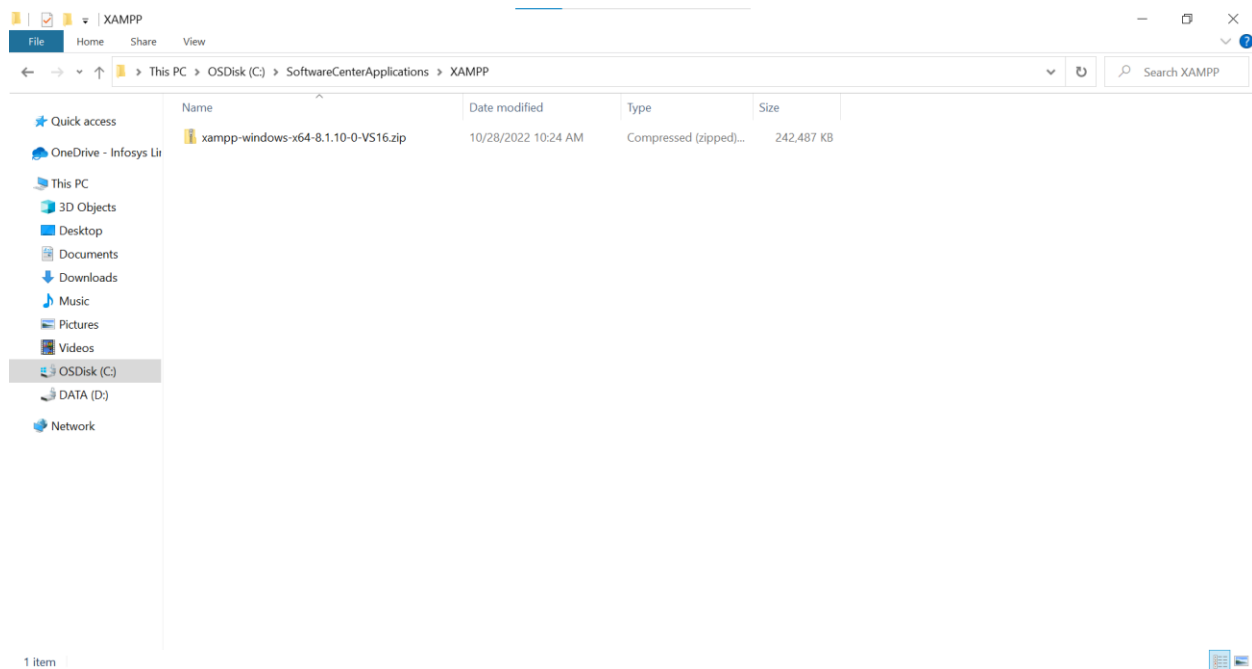

You can launch the eclipse application by running the eclipse.exe available in the eclipse folder.

Steps to install MySQL:

Step 1: Open the Software Center and Search for XAMPP as shown below:

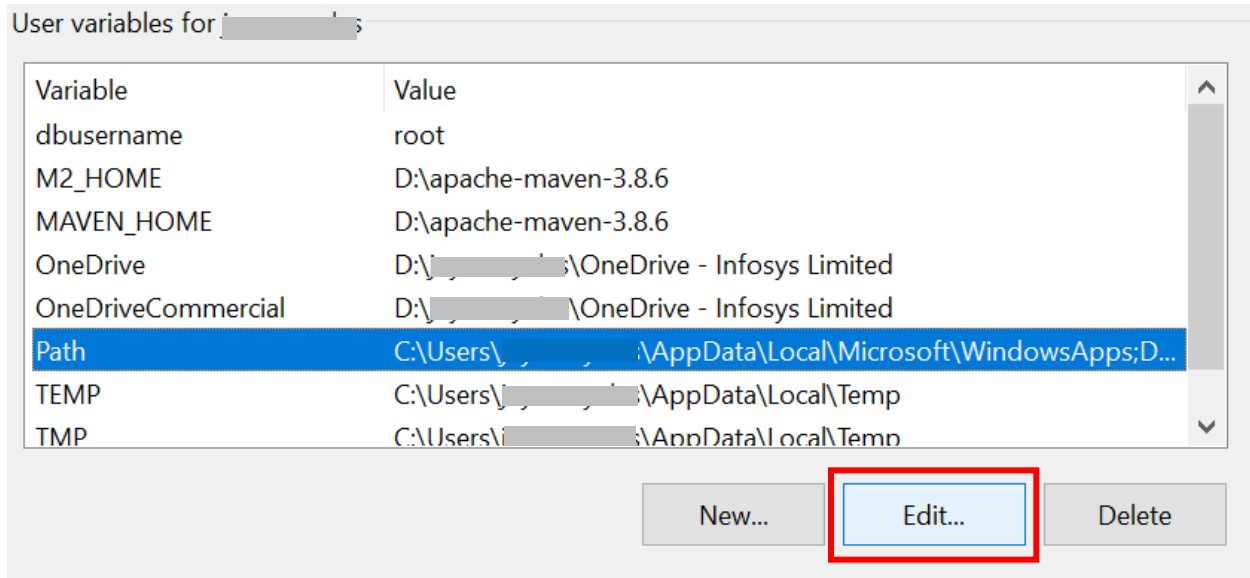

Step 2: Click on the XAMPP software and click on install. Upon successful download, you will be able to see the **xampp-windows-x64-8.1.10-0-VS16.zip** file in the path “C:\SoftwareCenterApplications\XAMPP” as shown below:

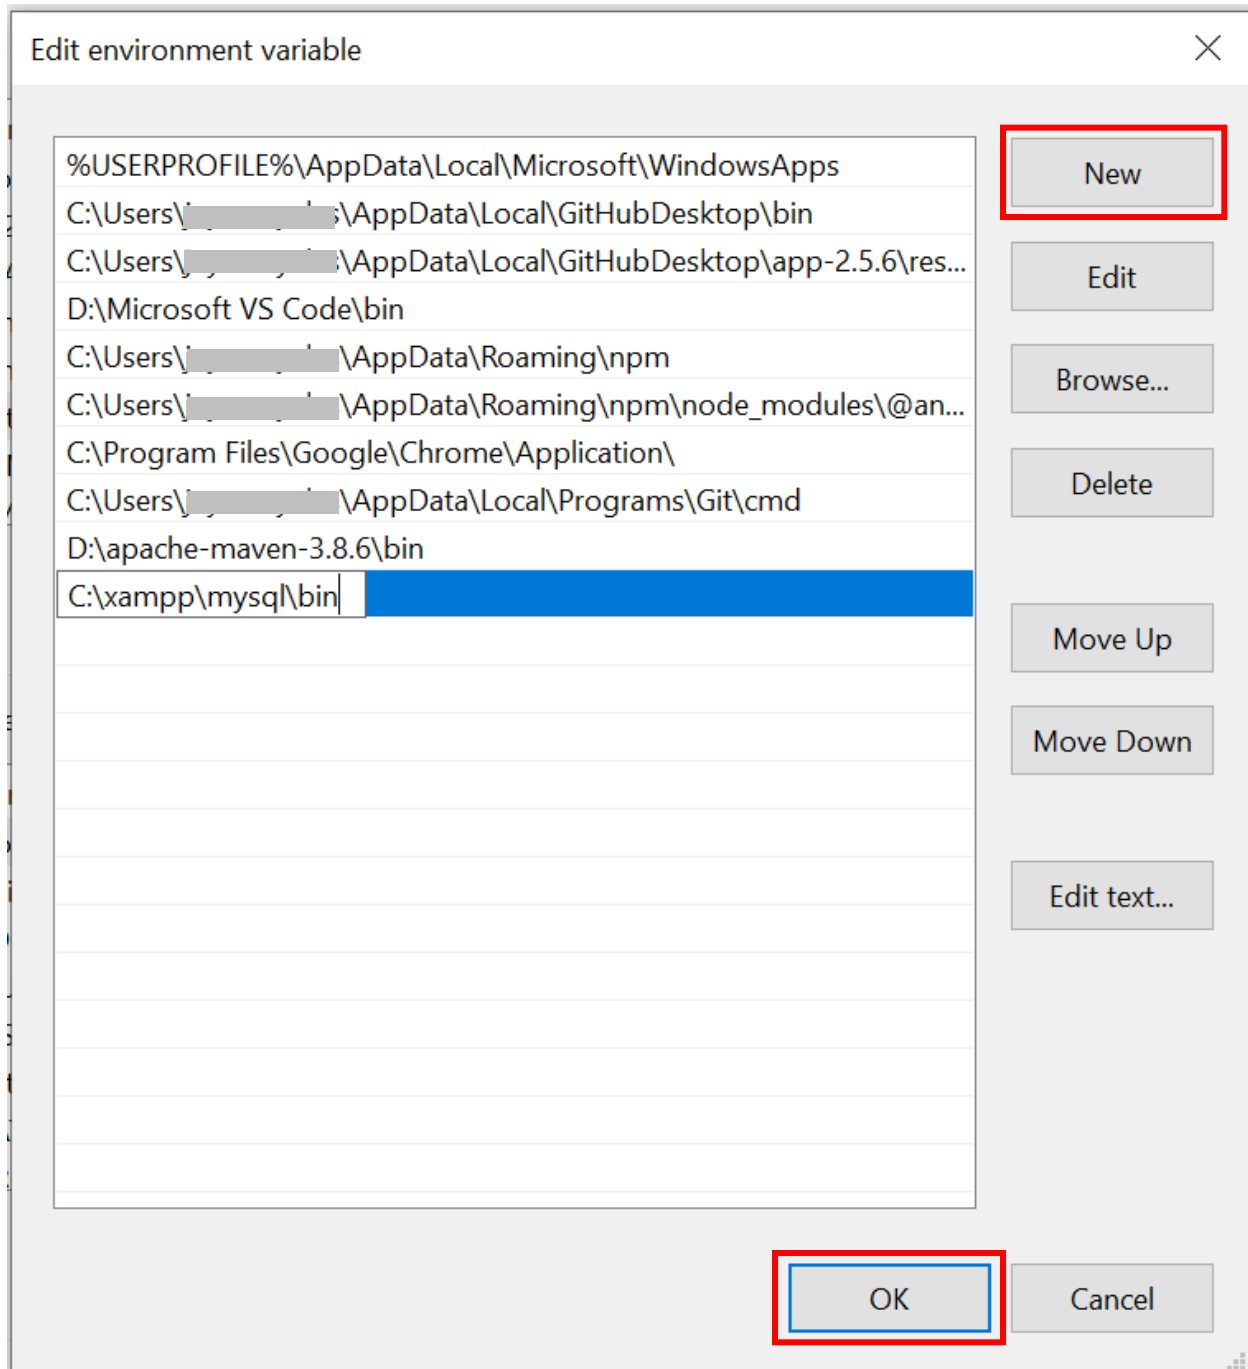

Step 3: Extract the zip file to any desired location (For example, C:\).

Step 4: Search for **Edit environment variables for your account** in the taskbar. In the window that is appearing, click on the variable **Path** and click on the Edit button as shown below:

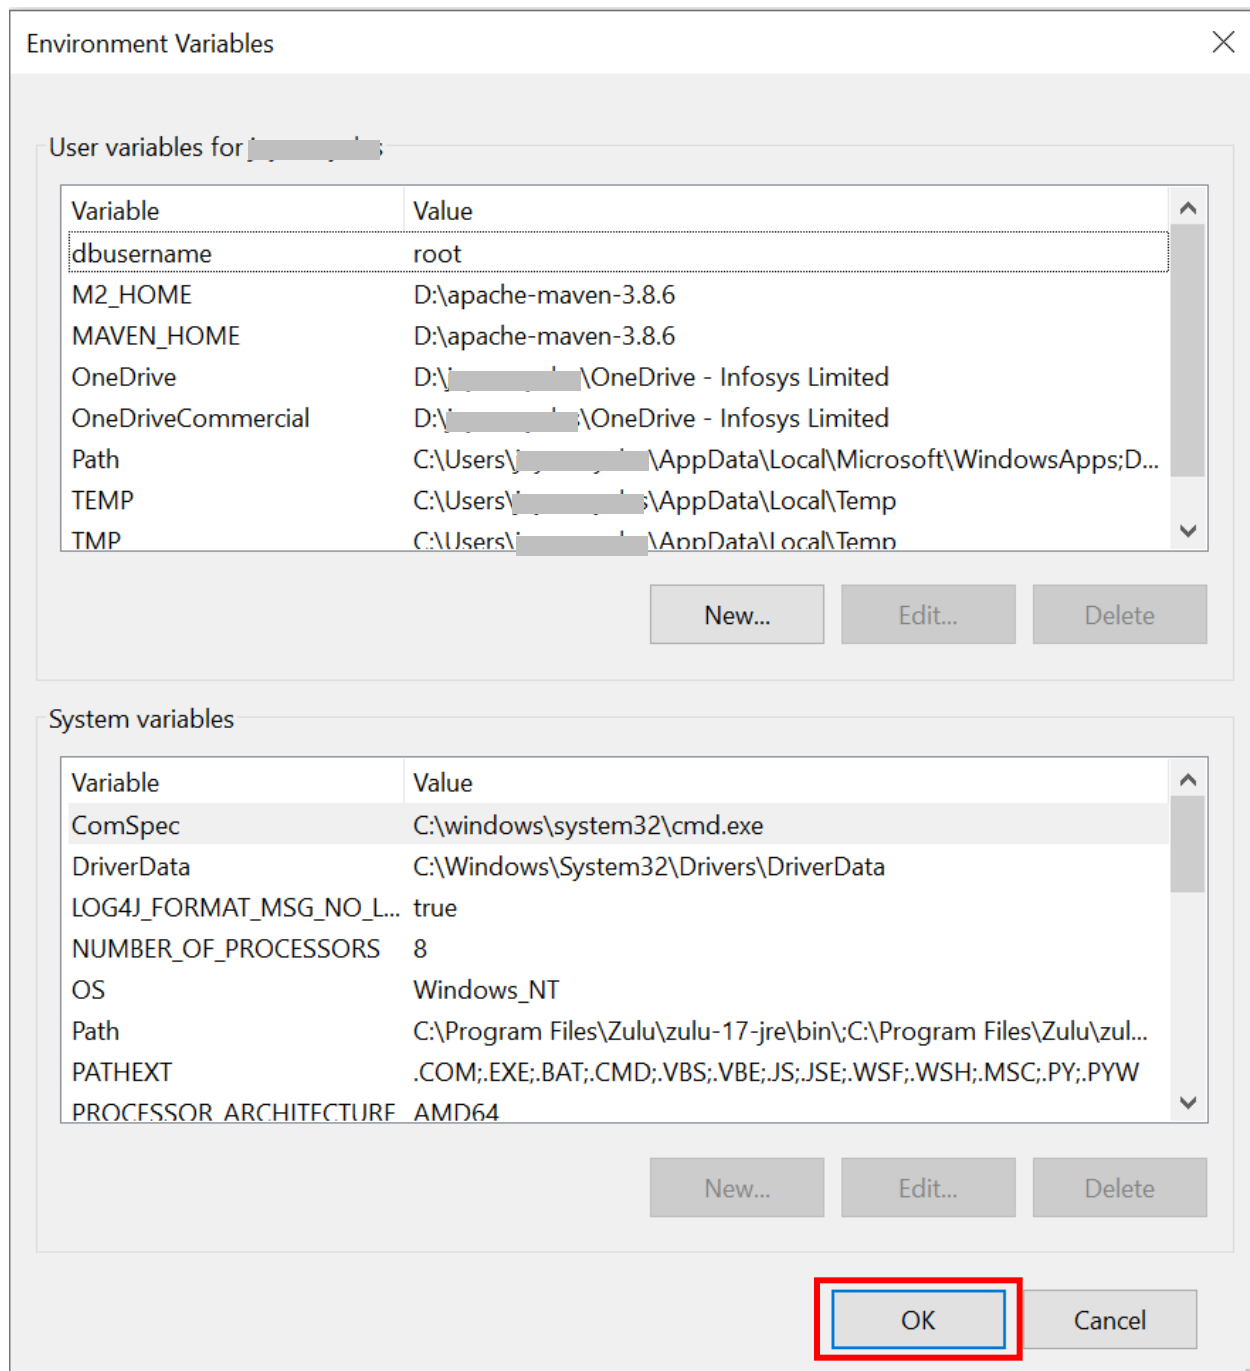

Step 4: In the popup appearing, click on the New button, enter the value as the **<Extracted Location>\xampp\mysql\bin** and then click OK. Refer to the below image.

In the example case, since We extracted the zip file to “C:\”, the Variable value would be **C:\xampp\mysql\bin**

Step 10: Again, click on OK in the exterior window as shown in the below image:

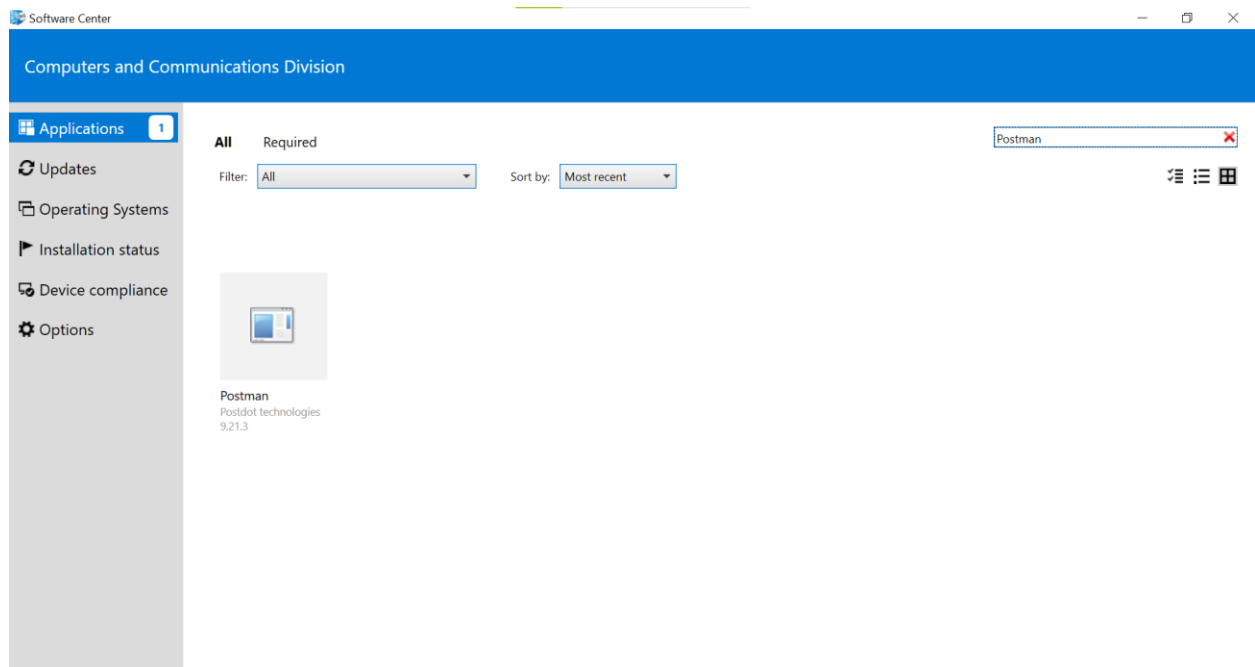

To check the correctness of the installation of Java, Open a command prompt and type:
where java

To check the correctness of the installation of Maven, Open a command prompt and type:
where mvn

To check the correctness of the installation of MySQL, Open a command prompt and type:
where mysql

Steps to install Postman:

Step 1: Open the Software Center and Search Postman as shown below:

Step 2: Click on the Postman software and then click on install.

Steps to install Node:

Step 1: Open the Software Center and Search Node as shown below:

Computers and Communications Division

Applications 4

Updates

Operating Systems

Installation status

Device compliance

Options

All Required

Filter: All

Node.js-LTS
Nodejs.Org
20.10.0

Step 2: Click on the Node.js-LTS software and then click on install.
